

ODONATA

Odonata is a 3" indoor drone that can fly autonomously and be controlled via the internet. With its ToF sensors, it can orient itself, while the camera detects the AprilTag to land on the docking station.

- **Controlled via MAVLink with Raspberry Pi Zero 2W**
- **Custom PCB for connecting FC with Pi**
- **Autonomous landing with AprilTag**
- **Controlled via the Internet**
- **3C 800mAh LiPo battery**
